

Downloadkey

For easy data handling

Downloadkey

The Siemens VDO Downloadkey is an ideal transport medium for downloading, and even archiving, mass memory data from digital tachographs. Offering maximum convenience and ease of use, it weighs under 50 g and is no bigger than a mobile phone, so it fits into a top pocket.

The Downloadkey has two interfaces: on one side there is a 6-pin serial interface, which is compatible with all digital tachographs, and on the other side it features a USB 2.0 interface for transferring data quickly and reliably to PC.

The Downloadkey requires no power supply and is therefore always ready for use in vehicles and with PCs.

Both load status (memory indicator) and operating mode are displayed visually.

The Downloadkey comes with integrated software as standard which allows various configurations to be selected as required, e.g. to download and archive driver card data via the DTCO 1381. In addition, the Downloadkey can be used as a conventional USB memory stick in conjunction with any PC.

The Downloadkey is the ideal tool for fleets, workshops and the authorities for downloading, transporting and archiving data.

SIEMENS VDO

Downloadkey

For easy data handling

Benefits

- | Easy handling: light, handy, compact and simple to use
- | Allows fleets and workshops to meet mandatory download requirements
- | Allows fleets to meet their mandatory archiving requirements
- | Convenient way to transfer data from digital tachograph to PC
- | Enables mass memory and driver card data to be downloaded using the front interface on digital tachographs
- | Allows downloading of driver card data via digital tachograph systems

Functionality/features

- | No external power supply required
- | No backup battery required to retain data
- | Compatible with all digital tachographs and computers featuring a USB connection
- | Fast data transfer to PC via USB 2.0 interface
- | Can also be used as a conventional USB memory stick (16 MB)
- | Suitable for both 12 V and 24 V systems
- | LEDs indicate operating mode and storage capacity
- | Sufficient capacity for approx. 50 quarterly downloads

System requirements

- | Windows® 98, 2000, Windows® NT Service Pack 4 and Windows® XP
- | Internet Explorer version 5.0 or above
- | Spare USB port

The Downloadkey from Siemens VDO is an ideal medium for downloading, transporting and even archiving mass memory data from digital tachographs. It offers maximum convenience and ease of use.
